

Tom Muye AC4TM Go Box

Tom's Go Box features a Kenwood D700 transceiver. The Control Head is mounted above the base and the radio body is located beneath the base. Tom included a small speaker on top, so he's not depending on being able to hear the speaker in the D700.

Power supply is a Samplex 1223. There is a small 12V fan under the base to help cool the equipment. The base is not "fastened" to the case, so it can easily be lifted to provide additional cooling. Top-mounted Anderson PowerPole connectors provide 12VDC to other devices as needed.

Above: A 7Ah 12V battery provides power. Mounted atop the battery is a SOLAR20 charge controller that, when Tom's solar panel is connected, recharges the battery.
