

Dave Penezic Go Box

Dave says the whole assembly weighs about 40#.

There is an exhaust fan at the back of the box. It's a 24V fan running on 12V, so it runs quietly.

There's a lot crammed into this Go Box...*Refer to the photo below:* There is a strip of LED lights across the top lip of the box to help illuminate the workspace. Top Row: Kenwood TM-261 VHF Transceiver, tied to a Kantronics Packet KPC-3+ (just below the SignaLink unit) for WinLink 2000. At top right is a Yaesu FT-8100 for VHF voice communication. Dave didn't bring the Laptop that runs WinLink.

Middle Row:
ICOM 706 HF Transceiver with an SWR meter between it and the LDG-7000 Autotuner for the 706.

A Radio Shack Pro2038 Scanner sits above the autotuner.

Bottom Row:
An SEC 1223 13.8VDC power supply.
